

Assemble a Computer

1. In this quiz, you will assemble a computer virtually by dragging-and-dropping the components to the corresponding sections.

In the CPU section, you will need to place the 4 items in the correct order, from bottom to top (as shown in the picture below), as if it were a physical computer.

Click the "Check" button to check your answers. Correct placements will be outlined in green, and incorrect placements will be outlined in red. If you've made a mistake, edit your placements or click the arrow to reset all placements and try again. When you're done, click the "Submit" button for a grade.

Quiz consideration:

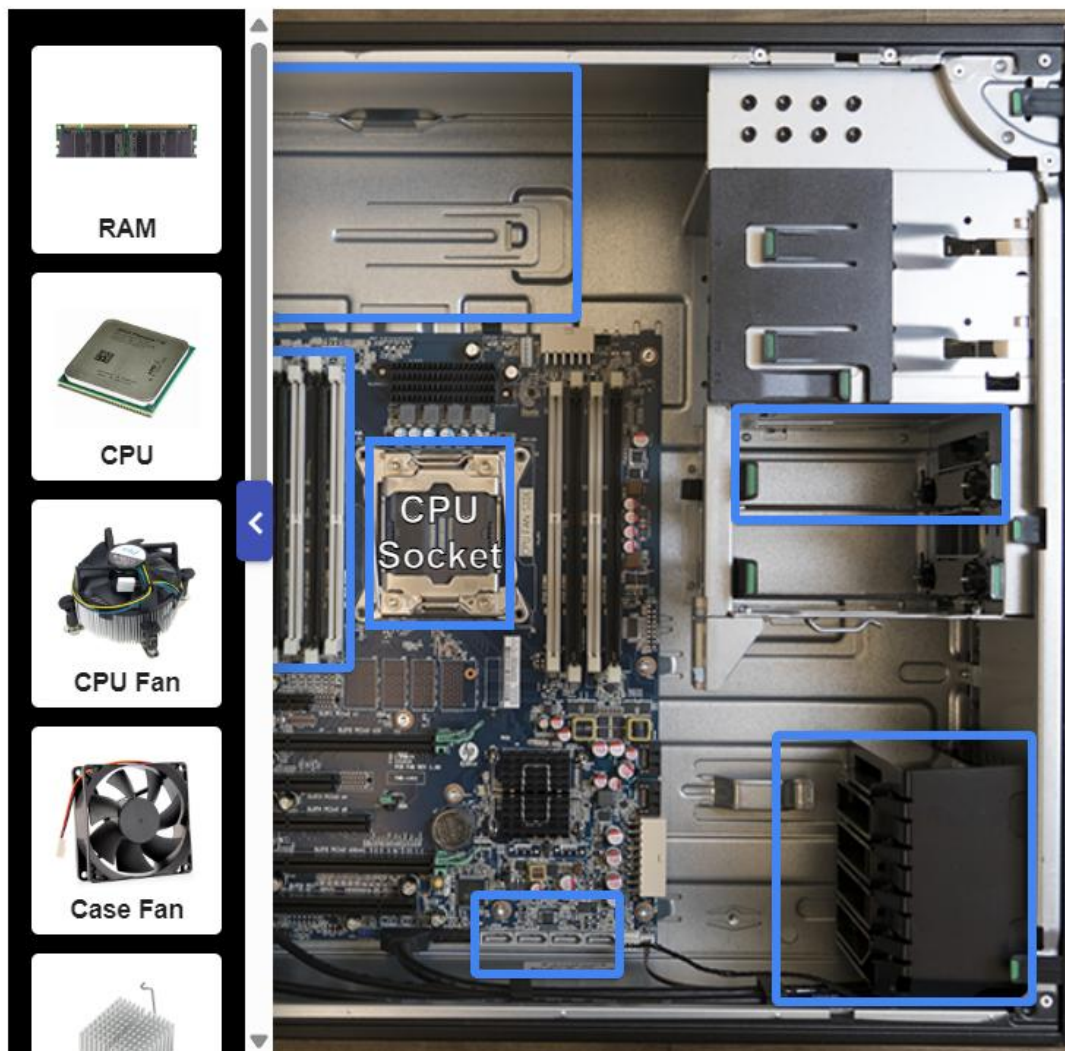

1. To select components, drag and drop or click inside the square and choose the appropriate component from the list.

1. When dropping the component into place, be sure to have a white line outlining the place where you are dropping (see picture below).

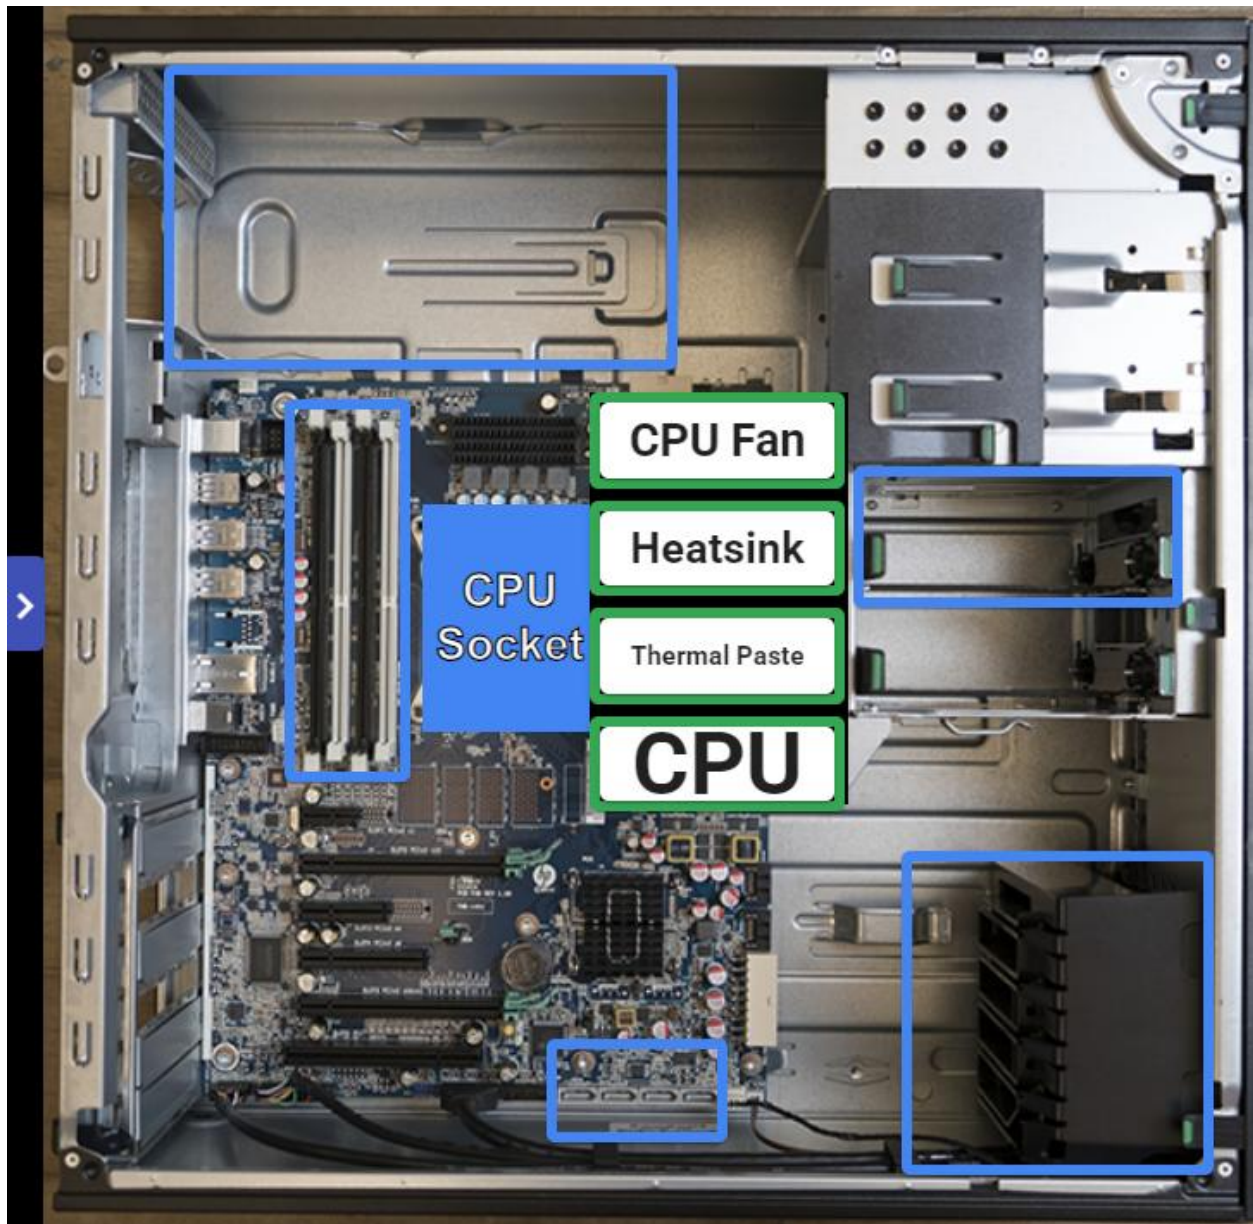

Assemble a Computer

Answer:

Part 1:

Part 2:
